KIT COMPONENTS NOTICE
(The importance of the pack list)

Your kit includes a packing list of every item included in your kit. After performing a full post-delivery inventory of your kit and reporting any packing errors, the packing list remains a valuable tool to help you determine which parts have been provided in your kit and which parts you will need to make. Optional fast-build components, as well as our continually evolving kits, impact the contents of each individual kit. The first place to look when wondering if you have to build a particular part is on your packing list.

Parts not included in your kit may be available for separate purchase. Please contact Sonex Aircraft to inquire. For common hardware items, please refer to the packing list included with your third-party hardware kit. Sonex Aircraft does not include common hardware (other than pulled rivets) in the airframe kits.
